Support Engineer Owner - SaaS Applications Assignment

Star Wars API

<https://swapi.co>

Write a script (bash/batch/python, anything) which accepts the name of a Star Wars character as input and queries the Star Wars API.

- It should output the name, birth_year and name of the species the character belongs to
- If the character name given is not a Star Wars character the script should inform the user of the error

To submit your work please invite “pnawalramka”, “rhysecampbell” and “jc-rob” to a public GitHub project and be sure to document any configuration or run instructions.
